1. Marketing Mart

The Marketing Data Mart centralizes and curates cross-domain customer and transaction data to enable targeted marketing analytics, campaign measurement, and data-driven growth strategies.

Marketing Data Mart — Definition

The Marketing Data Mart is a subject-oriented, analytics-ready repository designed to support marketing analytics, campaign performance tracking, and customer segmentation. It consolidates data from multiple upstream sources and enterprise marts—such as Application (Origination), Account, Transaction, and Customer/Demographics—to provide a unified view of customer behaviour and engagement.

What the Marketing Mart Does

- **Integrates cross-domain data** (applications, accounts, transactions, demographics).
- **Enables precise segmentation** based on spend behaviour, demographics, and engagement.
- **Tracks campaign performance** using standardized metrics (response rate, conversion, ROI).
- **Supports trend analysis** and predictive insights from historical behaviour.
- **Improves targeting and customer experience** by powering personalized strategies.

Typical Structure

- **Facts:** Campaign performance, customer responses, conversions, spend lift.
- **Dimensions:** Customer, account, product, time, channel, campaign.
- **Consumption:** Curated views for BI tools and downstream models.

Marketing Data Mart – Stats

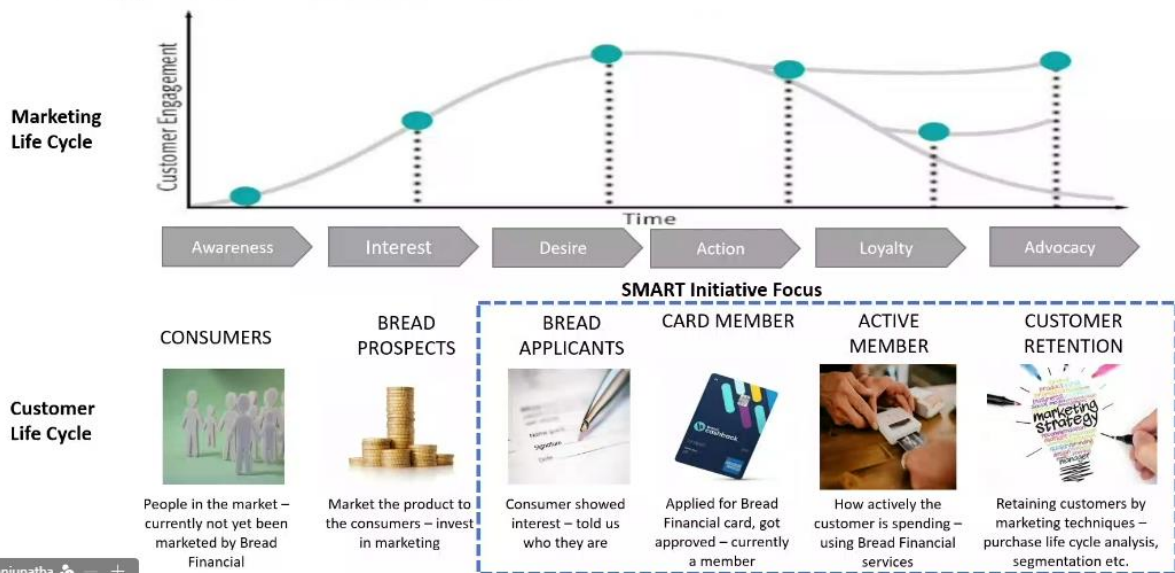

Metric	Count
Dimension Tables	1
Fact Tables	1
Consumption Views	1

Each marketing stage maps to a **customer state**:

- **Consumers:** Not yet marketed by Bread (market population).
- **Bread Prospects:** Reached by campaigns; marketing investment begins.
- **Bread Applicants:** Express interest; provide details and apply.
- **Card Member:** Approved and onboarded.
- **Active Member:** Actively spending and using services.
- **Customer Retention:** Retained through lifecycle analysis, segmentation, and offers.

MARKETING AND CUSTOMER LIFE CYCLE

Integrated current vision

SMART Initiative Focus

The dashed section highlights where **SMART initiatives** concentrate—primarily from **Applicants** → **Active Members** → **Retention**, where ROI is highest:

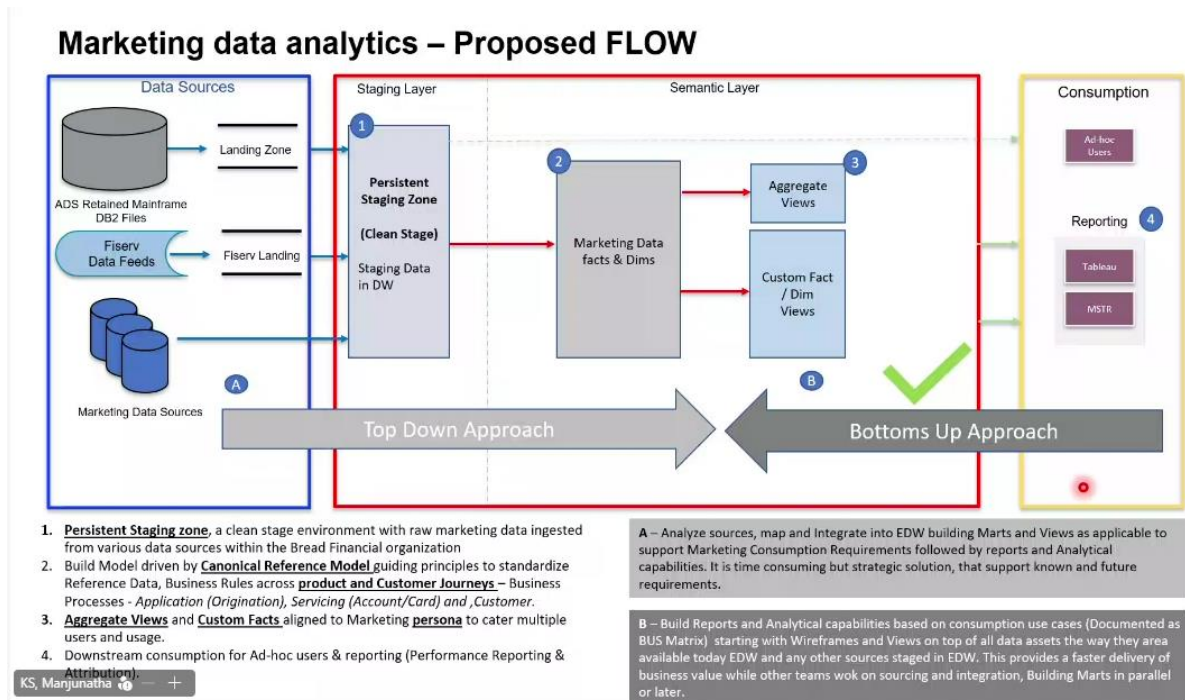

- Improve conversion at **Application/Approval**
- Drive engagement post-approval
- Reduce churn and increase lifetime value

How the Marketing Data Mart Supports This

The **Marketing Data Mart** operationalizes this vision by:

- **Integrating** Application, Account, Transaction, and Customer/Demographic data
- **Segmenting** customers by lifecycle stage and behaviour
- **Measuring** campaign performance (response, conversion, lift)
- **Enabling** targeted strategies to move customers forward on the curve

2. Data Flow:

The proposed Marketing Data Analytics flow transforms raw data from multiple source systems into a governed, performance-optimized semantic layer. Persistent staging ensures clean data ingestion, while marketing marts and views provide targeted insights. A combined top-down and bottom-up design approach balances strategic goals with quick deliver.

End-to-End Flow:

Sources → Landing → Persistent Staging → Marketing Data Mart (Facts/Dimensions & Views) → BI/Reporting

EDW_NZ_PROD01.MINI.ME_MKTG_METRICS_VW

- A curated marketing metrics view
- Contains 103 columns

Source Tables (Data Mart Layer – PROD)

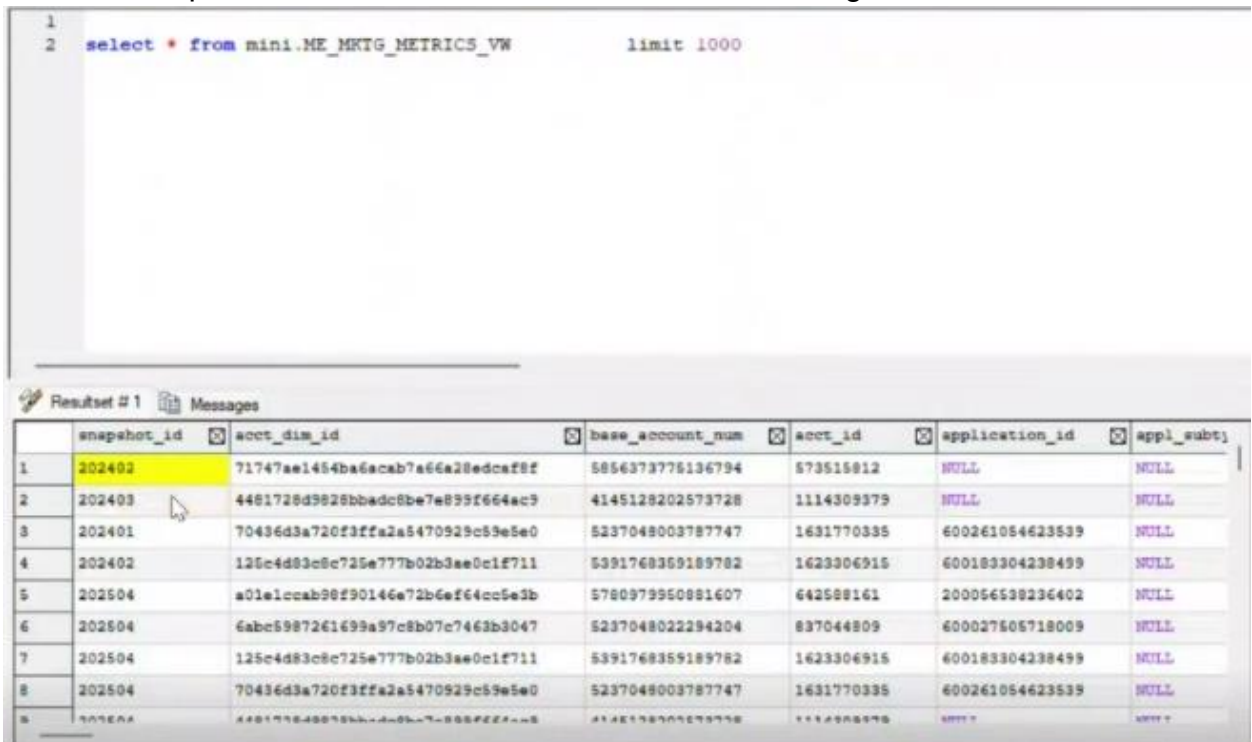

1. **FAB_PROD01.MKTG.MKT_ACCT_DIM**
 - Account-level **dimension** table
2. **FAB_PROD01.MKTG.MKT_ACCT_ME_FCT**
 - Marketing **fact** table

Transformation / Integration

- The **dimension (DIM)** and **fact (FCT)** tables are **joined** using business keys (e.g., account_id, customer_id).
- mini – Consumption layer – consumption views are built

Data in Marketing Data Mart

- In the HIST_CD column, 'X' indicates that the account is not delinquent, while '0' indicates a delinquent status.
- Most of the columns observed here are derived from the Account Data Mart.
- LOGO ->1 represents the standard Bread Financial branding.

The screenshot shows a SQL query editor with the following query:

```
1  
2 select * from mini.ME_MKTG_METRICS_VW limit 1000
```

Below the query editor, the results are displayed in a table with 7 columns: snapshot_id, acct_dim_id, base_account_num, acct_id, application_id, and appl_subt1. The first 8 rows of data are shown.

	snapshot_id	acct_dim_id	base_account_num	acct_id	application_id	appl_subt1

Key points

- To date, there have been no enhancements, with only two releases completed so far.
- The process runs on a monthly basis.
- The data history is available from **June 2022** onward.
- The entire process is fully digitalized, with no manual paperwork involved.
